MAI TAN PHUC

Full-Stack Software Engineer

mtp20032003@gmail.com | 0903 020 347 | Go Vap, Ho Chi Minh City | cv-mtp.vercel.app

SUMMARY

Full-stack Software Engineer with 3 years of experience shipping web products end to end with Next.js, React, Node.js and Python. Works AI-first every day and builds AI-powered features with LLMs, agents and MCP

EXPERIENCE

Software Engineer (Full-Stack, Data & AI Automation)

09/2025 – Present

Freshdi - Global B2B Marketplace · Ho Chi Minh City, Vietnam

Built core product features end to end for suppliers and buyers, driving 12x growth in new users:

- Sign-up, account verification and business-document verification flows, plus quick posting of quotation requests and products.
- Chat for inquiries and quotations, business trust scores, membership plans and payments.
- A supplier overview page with Free and Paid versions, showing store performance, to-do actions and buyers waiting for a reply, tuned for phones.
- Integrated legal consent into dozens of screens, a Google Analytics 4 event system with UTM tagging to measure the sign-up and upgrade funnel, and a trilingual UI (English, Vietnamese, Chinese) with auto-translation scripts.

Worked AI-first every day and built AI-powered product features:

- Used Claude across prototyping, debugging and shipping: wrote 8 internal AI guides so AI generates code that follows team standards, and used Claude Design to mock up demo UIs so BAs could settle ideas quickly.
- AI agents that auto-reply to buyers in chat (quotations, supplier questions, follow-ups) and review suppliers, plus 2 MCP servers (public and internal, 17 tools) that let AI assistants work with product, quotation and market data, with role-based access and audit logging.
- A Claude-driven agent controls a browser to crawl LinkedIn groups, request to join, connect and message matching suppliers, with a rule-based and LLM guardrail layer.
- Used an LLM to grade quotation requests and product listings into 4 quality tiers, passing only the top tier into automated posting.

Automated content creation, boosting Marketing productivity 5x:

- Built a blog pipeline on SEO templates: an LLM writes and paraphrases articles, adds images and real supplier, quotation and market data, and posts to WordPress on a schedule.
- Built a social pipeline that turns quotation requests, products and market figures into posts, de-duplicated by hash with a per-category cooldown, scheduled through a social-posting tool, each post going out only once.
- Generated images with the Flux model, with prompts written by AI per category, plus background removal and infographic thumbnails.

Built data pipelines and automated customer data collection (FFrape), making the Sales team 3x faster:

- Scraped many B2B marketplaces (IndiaMart, Made-in-China…) using multiprocessing, rotating proxies and automatic captcha solving; used crawl4ai and Gemini to extract contact details.
- Cleaned, de-duplicated (MinHash/LSH) and auto-categorized data by product category and customs code, so Sales receives ready-to-use leads instead of entering data by hand.

Improved technical SEO and page speed, doubling SEO results (2x):

- Separated public data (what Google reads) from per-user data and generated structured data (JSON-LD), meta tags and sitemaps on the server; built a Redis cache for self-refreshing static pages (ISR) on a self-hosted multi-process server (PM2).
- Built the Blog and Events website with Astro 5: structured data, RSS, sitemap, title-based URLs with canonicals and redirects, on-site search, and lead-capture banners with UTM tagging to bring readers into the product.
- Built 15 tools to measure speed (TBT, CLS, LCP, INP), A/B compared builds, removed about 98 KB of unnecessary JavaScript from every page, and added an automated check that blocks changes that bloat it.

Fullstack Developer

09/2024 – 09/2025

HUNGPHUC CONSTRUCTION · Ho Chi Minh City, Vietnam

- Built the company's website and REST API end-to-end with **Next.js** and **Express + PostgreSQL**, covering the project portfolio, pricing, news and contact forms.
- Developed an **AI-powered cost estimator** that combines a configurable pricing engine with an LLM (Gemini/Claude) to turn customers' free-text descriptions into estimates, then into sales leads.
- Engineered an AI-driven content automation pipeline using Node.js and ChatGPT to research trends and generate SEO-optimized articles, scaling content output to an average of 20 new articles per week with minimal manual intervention.
- Built a custom **admin CMS with role-based access** (rich-text editor, project galleries, lead pipeline with status, assignment and notes, analytics dashboard), improving cross-departmental workflow efficiency by **50%**.
- Implemented **technical SEO** with SSR/ISR, dynamic metadata, sitemap, JSON-LD structured data, llms.txt and automatic WebP image optimization, boosting organic traffic by **30%+** within 3 months.
- Secured the system with **JWT + refresh tokens in httpOnly cookies**, rate limiting, Helmet and Joi validation, and added UTM tracking to show which campaigns bring in customers.

Intern Frontend Developer

12/2023 – 04/2024

FPT SOFTWARE · Ho Chi Minh City, Vietnam

- Developed a fresher and intern management system for FPT Software used by over 100 users, leveraging ReactJS, Redux, Firebase, and React Hooks.
- Clarified business requirements in project, contributing to refined feature implementation.
- Ensured cross-browser compatibility for the system across browsers and platforms, enhancing accessibility.
- Increased system efficiency by 10% by optimizing code, rerendering interfaces properly, and avoiding redundant API calls.
- Contributed to designing and refining user interface components based on feedback and project needs.

Tech Stack:

- Frontend: ReactJS, Redux

EDUCATION

Bachelor of Software Engineering

09/2021 – 09/2025

FPT University (3.25/4) · Ho Chi Minh City, Vietnam

- Honorable student of multiple semesters
- Capstone Project Considered by University for Practical Use

SKILLS

Front-end: ReactJS, Next.js, TypeScript, TanStack Query, Zustand, Redux Toolkit, Astro

Back-end & Data: Node.js, Express.js, Python (Frappe), RESTful API, JWT, PostgreSQL, MongoDB, Redis

AI & Automation: LLM APIs (OpenAI, Gemini, Claude), AI agents, MCP servers, prompt engineering, Claude Code, AI-assisted development

Other: Technical SEO, Core Web Vitals, Git, Cloudinary, strong analytical thinking, good English communication (technical writing & documentation)

CERTIFICATES

- Initiating and Planning Projects — Coursera
- Project Management Project — Coursera
- Managing Project Risks and Changes — Coursera
- UX Research at Scale: Surveys, Analytics, Online Testing

PROJECTS

FUC

Capstone management system for FPT university teachers and students. · github.com/SP25SE148/FUCapstone_FE.git

Description: A real-time system that helps supervisors and students manage capstone projects efficiently:

- Supervisors can create/approve topics, manage groups, and review results, while students can form groups, select topics, and manage tasks.
- The system also handles defense scheduling and sends automated notifications/emails.

Tech Stack:

- Frontend: Next.js, TypeScript, React Hook Form, ShadcnUI
- Backend: ASP.NET
- Database: PostgreSQL
- Others: AWS, Sentence Transformer AI

TMG

Task Manage Group · github.com/mtphuc253/Manage_Task_Groups_Fullstack.git

Description: Organize group tasks, stay productive and manage your group daily tasks efficiently with intuitive platform:

- The system allows team members to manage members, assign tasks, update and manage progress, and calculate team performance statistics.
- Export files based on statistics on the system.

Tech Stack:

- Frontend: ReactJS, React Hook Form, ShadcnUI
- Backend: NodeJS/Express
- Database: MongoDB
- Others: Firebase, XLSX
